

Optical Design and Fabrication Techniques

24th & 25th September, 2025

Overview of the Workshop

Design optical systems aligned with real-world manufacturing constraints. Explore key fabrication methods: grinding, polishing, molding, MRF, laser processing. Understand tolerance analysis and advanced metrology strategies (interferometry, profilometry). Cover integration essentials: alignment, bonding, and opto-mechanical design. Introduce cutting-edge trends: free-form optics, metasurfaces, additive micro-optics
